

// FIREWALL

# Enterprise Security. Built For Critical Networks.

Pinaca Firewall delivers advanced threat prevention, application awareness, encrypted traffic inspection, and secure connectivity for organizations operating in high-security environments.

Designed for enterprise, government, healthcare, and critical infrastructure deployments.

//

## The Foundation Behind Secure Operations.

Modern networks face increasingly sophisticated threats that bypass traditional perimeter defenses.

Pinaca Firewall combines threat prevention, application intelligence, intrusion protection, and centralized policy control into a single security platform designed for continuous protection.

// FLAGSHIP SECURITY PLATFORM

### Pinaca NGFW ENTERPRISE NEXT-GENERATION FIREWALL

Purpose-built to protect modern digital environments against advanced threats, unauthorized access, malware, and data exfiltration.

//

## Core Advantages.

### Threat Prevention

Advanced IPS, malware protection, botnet detection, and reputation-based security.

### Application Visibility

Deep application awareness and granular policy enforcement.

### Secure Connectivity

High-performance VPN and encrypted traffic inspection.

### High Availability

Active-Active and Active-Passive clustering for uninterrupted operations.

## Security That Never Sleeps.

Protect critical infrastructure, sensitive data, and operational networks with enterprise-grade threat prevention.

// CENTRALIZED MANAGEMENT

# One Console. Complete Visibility.

Manage security policies, threat intelligence, logging, and firewall operations through a centralized management platform engineered for enterprise-scale deployments.

//

## Built For Scale.

Designed to manage distributed environments while maintaining complete visibility across networks, users, applications, and threats.

Supports centralized policy management, role-based administration, audit logging, and security orchestration.

## Platform Capabilities.

### Centralized Policy Management

Deploy and manage security policies from a unified interface.

### Role-Based Administration

Granular control for administrators, operators, auditors, and security teams.

### SIEM Integration

Share events and telemetry with enterprise monitoring and response platforms.

### Advanced Visibility

Real-time monitoring, analytics, reporting, and threat investigation capabilities.

//

## Built For Continuous Security.

Enterprise security requires visibility, control, and resilience.

Pinaca Firewall provides the operational foundation required to secure modern networks at scale.
